The Alte Donau: Successful Restoration and Sustainable Management

An Ecosystem Case Study of a Shallow Urban Lake

Series: Aquatic Ecology Series

- Provides a variety of strategies to restore and manage deteriorated recreational urban waters.
- Broadens the understanding of the importance of all trophic levels of the food web for successful rehabilitation and implementation of landscape architecture for an attractive recreational site
- Clearly demonstrates that long-term efforts are essential for sustainable recovery

Here we report on a 25-year long-term sequence of measures to return a deteriorated recreational urban lake, Alte Donau in Vienna to acceptable water quality. Metropolitan waters require focused ecosystem management plans and intensive in-lake efforts. We explored physico-chemical conditions, food web from viruses to fish and water birds, the sediments, the littoral zone and the catchment, management and urban planning, and global warming. Several restoration techniques were tested and critically evaluated. The final management plan was based on bi-stable theory. During the recovery phase, numerous surplus adjustments had to be implemented to secure sustainable achievement.
